

ABSTRACT OF THE DISCLOSURE

A water dispersible granule includes the ingredients of wetting agent, dispersing agent, binder, disintegrant, acid, base, carrier and pesticide, wherein the above ingredients are combined to be 100%. All
5 the above components of insecticide are mixed with water and
extruded. The extruded material is baked in an oven that has operation temperature set from 40°C to 50°C and the baked material ground into small granules by machine or manpower.
